

of 1:0.5-1:20 (preferably 1:1-1:4).

Preferred Process: The ingredients of the inclusion complex are preferably co-ground in a high-energy mill.

ABEX UPTX: 19991116

SPECIFIC COMPOUNDS - The water-soluble complexing agents are alpha, beta, gamma-cyclodextrin or their derivatives, or sodium carboxymethylamide. The hydrophilic linear polymers are **polyvinylpyrrolidone** (PVP), cellulose and their derivatives. The swelling reticulated polymers insoluble in water are reticulated **polyvinylpyrrolidone** (PVP XL), reticulated cyclodextrins, reticulated carboxymethylamide or dextrans.

ADMINISTRATION - Administration is oral, buccal (both claimed), parenteral, rectal, nasal, ocular or vaginal. The composition may be formulated in hard-gelatin or soft-gelatin capsules; rapid-dissolution, coated, sugar-coated, slow-release, enteric-coated or lyophilized **tablets**; granulates; suppositories; and solutions such as nasal sprays, drops or syrups (claimed). Dosage is 0.1-100 (preferably 1-10) mg per day.

EXAMPLE - Melatonin (232 g) and beta-cyclodextrin (5130 g) in a 1:4 molar ratio were dry mixed and transferred into a high-energy mill for 4 hours. The grinding time was set according to the degree of amorphism and the desired residual crystallinity. The product was poured and sieved on a 5000-mesh sieve.
